A SCOTCH FARMER'S SUCCESS —IN THE— CANADIAN NORTHWEST.

TWO HUNDRED MILLION ACRES.

Two hundred million acres is the estimated area of fertile lands in the Canadian Northwest. It can well be imagined that, in a territory so vast, localities can be found that possess special characteristics for the growth of wheat. Broadly speaking, farming as practised in this portion of Canada is of three kinds: Wheat growing, mixed farming, cattle and horse raising. For instance, the Province of Manitoba, which is the banner wheat Province, raised in one season thirteen million bushels of wheat, while the District of Alberta and Western Assiniboia supported last year, entirely on their natural grasses, 150,000 cattle, 15,000 horses, and 50,000 sheep. It is the purpose of this pamphlet to give the farming experience of a Scotchman who has been eminently successful in following that branch of agriculture known as wheat raising.

BRANDON, MANITOBA, December, 1889.

MR. L. A. HAMILTON, Land Commissioner, Canadian Pacific Railway, Winnipeg, Man.:

Dear Sir,—As the time for my departure for Scotland approaches, I feel that it will be impossible to give you an extended and detailed account of my experience as a farmer in this magnificent country, but I enclose you for

(6)

publication, if you approve, a short sketch, which was written from notes taken of an interview with me some time ago, in which the facts are as therein stated, and which covers the ground fully and well, and presents briefly the points that I think would be of interest to those asking for information about farming in Manitoba on a large scale, as seen from the standpoint of an actual farmer. It may also be of interest to you to know the result of my last season's work.

I have now in my farm 2,500 acres, and of this I had under crop 800 acres, over 700 of which was in wheat, which yielded 17,000 bushels. The result, considering the unusually dry season, was highly satisfactory to me, giving a handsome profit on the season's work.

I commenced seeding about the 26th of March, harvesting on the 8th of August, and had the whole crop not only cut and threshed, but delivered at the Brandon Elevator ready for shipment by the middle of September. The wheat turned out a splendid sample, nearly the whole of it grading No. 1 hard and No. 1 extra.

I have 1,750 acres fall ploughed and harrowed, so that I can take advantage of the first opportunity in the spring for seeding. I think it of the greatest importance that the farmer should not only plough in the fall, but harrow as well. It is largely to this that I attribute my unvarying success.

I send you copies of some photographs, made this year, of farming scenes taken at my home. They will give you a better idea of farm life than I can do by writing a descriptive article. In the article enclosed there is only an outline of the method I have adopted, but I will be glad to answer any letters received from those desiring information about Manitoba farming that may be addressed to me at Brandon, Manitoba.

J. W. SANDISON.

THE STORY TOLD.

It is often noted by observers that Manitoba has its greatest admirers amongst those who live within its borders, while its detractors are almost invariably either lazy-bodies, who have lacked sufficient industry to succeed, or else men who never lived in the Province at all.

It is only within recent years that one of many instances of what a man can accomplish there, who has industry, ability, push and good judgment, has come before the public. Reference is here made to Mr. J. W. Sandison, who is the successful proprietor of a large wheat farm, some four miles from Brandon, and who has actually under cultivation 2,000 acres.

The story of his experience in Manitoba, as told by himself, is one which is full of encouragement to young men of industrious habits and good capabilities, intending to take up their abode in that land.

Mr. Sandison is a Scotchman who, after having had a good experience in farming in the Old Country, came to Canada. He farmed in Ontario for a couple of years, and in 1883 resolved to try how a healthy experience and industry would profit him in Manitoba.

Thither, then, he went, without capital, relying solely on his own individual efforts, and his career, as will be seen, has been remarkably successful.

He commenced his Western life by hiring out on a farm for one year at \$26 (about £5 5s.) a month. The farm was situate near Brandon, and was a good one. While working as an employé, he had a good opportunity of examining the farming system in the country, and gathering some information, which has proved of extraordinary value.

After quitting work as an employé, Mr. Sandison resolved on trying it on his own hook. At first he took a homestead some fifty miles from the Canadian Pacific Railway, but he soon gave that up, concluding that to rent or buy a farm near the line was much more profitable. So, in the second year from his leaving Ontario, he rented a farm of 320 acres within four miles of the C. P. R., and near Brandon.

He concluded that, in Manitoba, land of the highest price was the cheapest in all cases, and that a man can within two or three years own land for which he has paid \$10 or \$15 (£2 to £3) an acre, within five to fifteen miles of a railway, while a man working a farm as far back as thirty miles from the line, will practically be able to do nothing.

He found that a great many people in Manitoba made a mistake in buying say 320 acres of land, and, instead of making every foot contribute a return, only working a little of it at first, and thus be paying interest on land which

was yielding no profit, or otherwise have his money lying idle in the land. He worked on the theory above enunciated, and in a very short time was the owner of his land.

On another point he showed his good judgment. As soon as he was able, he bought the best horses he could procure. This he found more profitable than purchasing inferior or worn-out animals.

Having got control of half a section, he broke it up at once, and made it pay for itself; then he bought a section, following the same method with it, and now, according to his estimate, the value of capital he has lying in labor alone is equal to \$10,000 (£2,000), a pretty good showing, indeed.

Another point regarding farming in Manitoba which Mr. Sandison brings forward is that the country is particularly adapted to farming on a large scale. It is, or should be, the ambition of every farmer to increase his holdings and the acreage of his crop, and he is perfectly right in this, so long, of course, as he has the labor and machinery to harvest the crops he sows.

In Manitoba the land is generally level, the fields are square, the furrows a mile or half a mile long, and consequently the farmer can make a correct estimate of the cost of his labor, since each man is required to do a like amount of work at the plough.

According to Mr. Sandison's idea, farming is much easier in the Prairie Province than in either the Old Country or Ontario, and, as has been already said, he speaks from actual experience. In the first place the cost of the land is at least one-tenth less in Manitoba than in either of the above-mentioned older countries. Then, on the whole, the land is more productive, and a superior article is produced, and especially is this so in regard to wheat.

In Manitoba it is not necessary to invest money in large barns to house the crops. It is not necessary to invest money in underdraining, as in older countries; neither does the farmer have to provide fencing, except on his permanent pasture. Especial attention should be given to these facts above stated. He also contends that the land is much easier to work, as one-third or one-half more can be prepared in a day than in these older countries.

FIFTH YEAR. FALL PLOUGHING.

THE YOUNG MAN'S CHANCE.

Speaking of the prospects of young men going out to Manitoba, Mr. Sandison says there is no difficulty in getting on, if the emigrant is willing to work hard and has a level head ; but he is particularly emphatic in advising no one to go there without capital who is not ready to put his whole powers of labor into the work. For the first two years he worked very hard himself at manual labor, but now he finds his time fully occupied in managing his large farm.

He is convinced that Manitoba is destined to be the agricultural country of the Dominion ; and, even now, people undervalue the vitality of the soil, as he considers it is much stronger than the general public imagines. From his own experience he is of the opinion that the much-talked-of summer frosts will be comparatively harmless, as soon as the inhabitants come to thoroughly understand the climate, and those parties who have, so far, suffered thereby have been themselves to blame in not doing their work in the proper season.

GOOD MARKETS.

There is no lack of a market, and the competition among the buyers is very keen.

The Manitoba farmer has this advantage : His wheat is worth ten cents a bushel more in the Eastern Market than that of his Eastern competitor, and this advance in price goes a long way to counterbalance the extra cost to the Manitoban of transportation.

MADE MONEY EVERY YEAR.

Referring to his own business affairs and his success, Mr. Sandison says that there has not been a year since he went to the country that he did not make money, and if he were to be approached with an offer of \$10,000 for the chance of his profits in 1890, he would not feel at all inclined to take it.

After having farmed in Ontario and Manitoba, he is convinced that he could not have accomplished the same results in any of the older provinces.

BRANDON DISTRICT.

This district forms part of the central prairie region, extending from Carbery, on the main line of the Canadian Pacific Railway, westward to Moosejaw, a distance of 300 miles, embracing a solid block of fully twenty-five million acres of the richest wheat raising lands. The soil is generally a clay loam of varying depth, not so heavy or sticky as the lands of the Red River valley; consequently, more easily worked, and possessing all the food that the wheat plant requires for its successful growth. The district is well watered by the Assiniboine, Little Saskatchewan, Oak and Souris rivers, all of which streams are timbered along their banks. The prairie level is broken south of the track by the Brandon Hills, a group of hills dotted over with clumps of timber, and intersected by many small lakes. The timber lining these rivers and covering the hills, along with that in the wooded district east of the Assiniboine River, furnishes a fuel supply for the farmers. Brandon, Douglas, Chater, Kenmay, Alexander and Griswold, as market towns, divide the business of the district; each of these places boasts of one or more elevators, and have their quota of grain buyers. Brandon is the county town, and next in size and importance of the towns of Manitoba to Winnipeg. West of Brandon, the country in 1881 was practically a wilderness, there being only one old settler on the north bank of the Assiniboine. But with the spring of 1882 the boom began, and the district was virtually overrun with newcomers—speculators in great part. But as the line advanced westward, only the steadily industrious settlers remained to form a solid nucleus for the future city and district.

Among those who engaged extensively in farming were Messrs. McBurnie, who took 10,000 acres in proximity to the town, and spent over \$100,000 (£20,000) in improvements; Mr. Whitehead, who put 500 acres in grain; the Hon. J. W. Sifton and others, who invested largely in farming and stock. The whole district is well adapted for mixed farming—cattle raising and dairying, as well as the culture of cereals. Several stations east and west of the

homesteaded, and it is now worth, the land alone, £200. I am perfectly satisfied with this country. I wouldn't wish for a better for farming or stock-raising, and wish hundreds of farmers in the Old Country only knew it.

"Erinview:

LACHLAN COTLIE."

"I am from Muirkirk, Ayrshire, Scotland, and settled in Manitoba in 1878. I was a plowman and had no capital, but now own 640 acres, worth \$8,000, or £1,600 sterling have three horses and 40 horned cattle, and have 160 acres under crop. In 1882 I had 3,000 bushels of wheat, which sold at \$1 per bushel, besides 900 bushels of oats and 500 of barley. I do not use manure; use barb wire fencing, costing eighty-two cents per rod with posts. I have bettered my condition by coming here, and am satisfied with the country and the prospects. Settlers arriving here in March can easily rent a piece of cultivated land and put in crop, and if he takes a homestead or buys land afterward he can break it ready for the next year.

"Portage la Prairie.

THOMAS MCCARTNEY."

"I would just say that if this should reach any of my Highland friends in the Old Country, and if they want any information to write me. I am well satisfied with Manitoba, and so is everyone who tries to get along. I came here in 1877 from Ontario with \$2,500, and homesteaded and pre-empted 320 acres, which is now worth \$8,000. I have 160 acres in crop, have thirty horses and cattle, and have bettered myself ten-fold by coming here.

"Morden.

D. MCCUISH."

"ALEXANDER STATION, MANITOBA, October, 1889.

"I take the liberty of giving you some of my own experience as a Manitoba farmer. I raised my first crop in 1883 from land broken late in the season of 1882 and backset in the spring of 1883, and had from 5 1/2 acres sown, 196 bushels wheat No. 1 hard. In 1884, had 40 acres rented to another party that yielded 32 bushels per acre. In 1885, the yield was 34 bushels per acre. In 1886 (another dry season), the yield was 20 bushels per acre. In 1887, 160 acres yielded 6,900 bushels, an average of 43 bushels per acre. In 1888, the average was 32 bushels per acre.

In the present year the average was 15 bushels per acre on 220 acres sown. I had 125 acres that yielded 20 bushels per acre; the balance, on account of a very hard stubble, plowed under last fall, and the season being dry, only yielded 10 bushels per acre. Now, for the seven years I have had crop, the average for wheat was 29 bushels per acre, and oats 43 bushels. And for five years the average of barley has been 25 bushels per acre, with the exception of 1887, when oats ranged 75 bushels; and the present season at 12 bushels, the general average was 50 bushels per acre. Mine is not an exceptional case. There are plenty of others who have as good a record as mine, and some better. The present dry season may be discouraging to new comers, yet it would be unfair to judge our country by the present dry one, and it convinces me that our soil with proper farming will raise a fair crop, under almost any circumstances. My crop this year had almost no rain, as not an inch fell from seeding to harvest. I came here from near Guelph, Ontario, with a capital of about \$700 (£140), and now have a farm of about 1,000 acres of land, 450 under cultivation; will sow 350 acres next spring and break 100 more. I have 11 horses, 3 good colts rising two years old, 4 colts rising one year, 12 head of cattle and 20 hogs, in all worth \$2,500 (£500). Implements worth \$1,000 (£250). Dwelling house, granary and stable, cost \$1,500 (£300). Now, it would have taken me a long time in Ontario to have gathered this much together on my capital. The difference with me between there and here is, six good crops and one poor one in seven years in Manitoba, and one good crop and six poor ones in seven years in Ontario. I must say I am well pleased with the country and the prospects before me, and think that any one who is able and willing to work, and who has some capital to start on, can do well in this new country a great deal easier than in an older country. I can point you to hundreds of settlers who seven years ago had hardly money enough left after coming here to buy a yoke of oxen, who to-day have a good half section (320 acres) of land, two good teams and everything needed to work their farms, and live comfortably. I would say to new settlers, don't be discouraged, but put in all the crop you can the coming season. It may be a repetition of 1887, as the ground is better ploughed this fall than I have ever seen it before. In conclusion, I would say that you are at perfect liberty to use this letter or any part of it, if of use to you in the interests of emigration, as the statements I have made can be corroborated by plenty of my neighbors, who have done just as well as I have, and some of them better.

“ALEX. NICHOL,

“Reeve of Whitehead, County of Brandon, Alexander Station, Manitoba.”

Canadian Pacific Railway Lands

TERMS OF PAYMENT.

If paid for in full at time of purchase, a Deed of Conveyance will be given; but the purchaser may pay one-tenth in cash, and the balance in payments spread over nine years, with interest at six per cent. per annum, payable at the end of the year with each instalment.

GENERAL CONDITIONS.

All sales are subject to the following conditions:—

1. All improvements placed upon land purchased to be maintained thereon until final payment has been made.

2. All taxes and assessments lawfully imposed upon the land or improvements to be paid by the purchaser.

3. The Company reserve from sale, under these regulations, all mineral and coal lands; and lands containing timber in quantities, stone, slate and marble quarries, lands with water-power thereon, and tracts for town sites and railway purposes.

4. Mineral, coal and timber lands and quarries, and lands controlling water-power, will be disposed of on very moderate terms to persons giving satisfactory evidence of their intention and ability to utilize the same.

Liberal rates for settlers and their effects will be granted by the Company over their Railway.

L. A. HAMILTON,
Land Commissioner,
Winnipeg, Man.

Government Lands.

HOMESTEAD REGULATIONS.

All even-numbered sections, excepting 8 and 26, open for homestead entry.

ENTRY.

Entry may be made personally at the local land office in which the land to be taken is situate, or if the homesteader desires he may, on application to the Minister of the Interior, Ottawa, or the Commissioner of Dominion Lands, Winnipeg, receive authority for some one near the local office to make the entry for him. Entry fee, \$10.

DUTIES.

Under the present law homestead duties may be performed in three ways:—

1. Three years' cultivation and residence, during which period the settler may not be present for more than six months in any one year without forfeiting his entry.

2. Residence for two years within two miles of the homestead quarter section, and afterwards next prior to application for patent residing for three months in a habitable house erected upon it. Ten acres must be broken the first year after entry, 15 acres additional in the second, and 15 in the third year; 10 acres to be in crop the second year, and 25 acres the third year.

3. A settler may reside anywhere for the first two years, in the first year breaking 5, in the second cropping said 5 and breaking additional 10, also building a habitable house. The entry is forfeited if residence is not commenced at the expiration of two years from date of entry. Thereafter the settler must reside upon and cultivate his homestead for at least six months in each year for three years.

HARVESTING IN MANITOBA.
